

VACCINES. DO YOU KNOW WHAT'S IN THEM?

-Human & Animal Cells

Human cells from **aborted fetuses** & human albumin; pig blood, horse blood, rabbit brain, guinea pig, dog kidney and more.

-Ammonium Sulfate(salt)

Suspected gastrointestinal, liver, nerve, and respiratory systems poison.

-Animal, Bacterial, & Viral DNA

Can be incorporated into the recipient's DNA & cause unknown genetic mutation.

-Beta-Propiolactone

Known to cause cancer, suspected gastrointestinal, liver, skin, & sense organ poison.

-Latex Rubber

Can cause life-threatening allergic reactions.

-Monosodium Glutamate

A neurotoxin, being studied for mutagenic, teratogenicity (fetal malformation), & reproductive effects. Can create mild to severe allergic reactions. Probable carcinogen: suspected in causing cancer in the liver, nervous, gastrointestinal, reproductive, respiratory & immune systems. Linked to leukemia, brain, colon, & lymphatic cancer.

-Polysorbate 80

Known to cause cancer in animals.

-Formaldehyde (Formalin)

Major constituent of embalming fluid; poisonous if ingested. Probable carcinogen: suspected in gastrointestinal, liver, immune system, nerve, reproductive systems & respiratory poison. Linked to leukemia, brain, colon, & lymphatic cancer

-Gelatin

Produced from selected pieces of calf & cattle skin, demineralized cattle bones, & pork skin. Allergic reactions have been reported.

-Micro-Organisms(often undetected)

Live & killed viruses & bacteria or their toxins. Millions of doses of polio vaccine were contaminated with monkey virus (SV-40), now trueing up in human bone, fun lining (mesothelioma), brain tumors, & lymphomas.

-Aluminum

Implicated as a cause of brain damage. Suspected factor in Alzheimer's disease, dementia, seizures, & comas. Allergic reaction can occur on skin.

-Gentamicin Sulfate & Polymyxin B (Antibiotic)

Allergic reactions can range from mild to life threatening.

-Glutaraldehyde

Poisonous if ingested. Causes birth defects in experimental animals.

-Mercury (Thimerosal)

The second most toxic element on earth (after plutonium). Has an affinity to brain, gut, liver, bone marrow, & kidneys. Minute amounts can cause brain/nerve damage. Symptoms of mercury are similar to those of autism.

-Tri(N) Butlphosphate

Suspected kidney & nerve poison.

Continued

-Neomycin Sulfate (Antibiotic)

Interferes with B6 absorption. A deficit in the uptakes of B6 can cause a rare form of epilepsy & mental retardation. Allergic reactions can range from mild to life threatening.

-Phenol/Phenoxyethanol (2-PE)

Used in antifreeze; toxic to all cells & capable of disabling the immune system's primary response mechanism.

In contention

At least six COVID-19 vaccine candidates use cells from fetuses aborted decades ago.

DEVELOPER	VACCINE TYPE	FETAL CELLS USED	HUMAN TRIALS	POTENTIAL U.S. FUNDING	WARP SPEED PICK
CanSino Biologics, Inc./Beijing Institute of Biotechnology	Replication-deficient adenovirus	HEK-293	Yes (phase II)	No	No
University of Oxford/AstraZeneca	Replication-deficient adenovirus	HEK-293	Yes (phase II/III)	\$1.2 billion	Yes (short list)
Janssen Research & Development USA	Replication-deficient adenovirus	PER.C6	No	\$456 million	Yes (short list)
University of Pittsburgh	Protein subunit	HEK-293	No	No	No
ImmunityBio/NantKwest	Replication-deficient adenovirus	HEK-293 or derivative E.C7	No	No	Yes (long list)
altimmune	Replication-deficient adenovirus	PER.C6	Expected this month	No	No
